Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool that helps teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Empathy Map Canvas: Nutrition Assistant – End User (Priya)

Persona: Priya, a working professional who wants to eat healthier but struggles to find time for manual nutrition tracking.

THINK AND FEEL Motivated to eat healthier but worried it will take too much time and effort; unsure whether she is getting enough protein or too many calories; hopeful that a simple tool will make tracking feel effortless rather than a chore.	SEE Friends and social media sharing meal photos and fitness progress; conflicting nutrition advice across different websites and influencers; existing tracking apps that feel cluttered or require a subscription for basic features.
HEAR Coworkers discussing diets and weight-loss trends; fitness influencers promoting specific eating plans; a doctor or nutritionist recommending she watch her calorie and protein intake.	SAY AND DO Says “I just want to know what's actually in my food without doing math”; Googles nutrition facts, screenshots food labels, and has tried logging meals in a notes app before giving up.
PAIN Manual calorie counting is tedious and error-prone; existing apps are cluttered or paywalled; scattered, sometimes contradictory nutrition information online; little time in a busy workday to log every meal in detail.	GAIN Wants a fast, reliable place to search food and log meals; clear daily calorie and macronutrient totals; a simple dashboard that shows progress at a glance; growing confidence in her food choices over time.
